dukta[®]
flexible wood

dukta - lighting

The pliable and permeable dukta sheets inspire to create unique lighting objects and lamps. The griddled openings in the wood not only allow the material to bend but a striking interplay of light and shadows. Shining through the incisions the warm light accentuate the overall design as well as the structure of the wood.

Behind dukta – flexible wood and the lights in this catalog are Serge and Pablo Lunin, father and son from Zurich, Switzerland. In addition to the further development and marketing of dukta – flexible wood panels for interior design, they develop and produce lights and other products that utilize the unique properties of their material in a variety of ways.

ORA

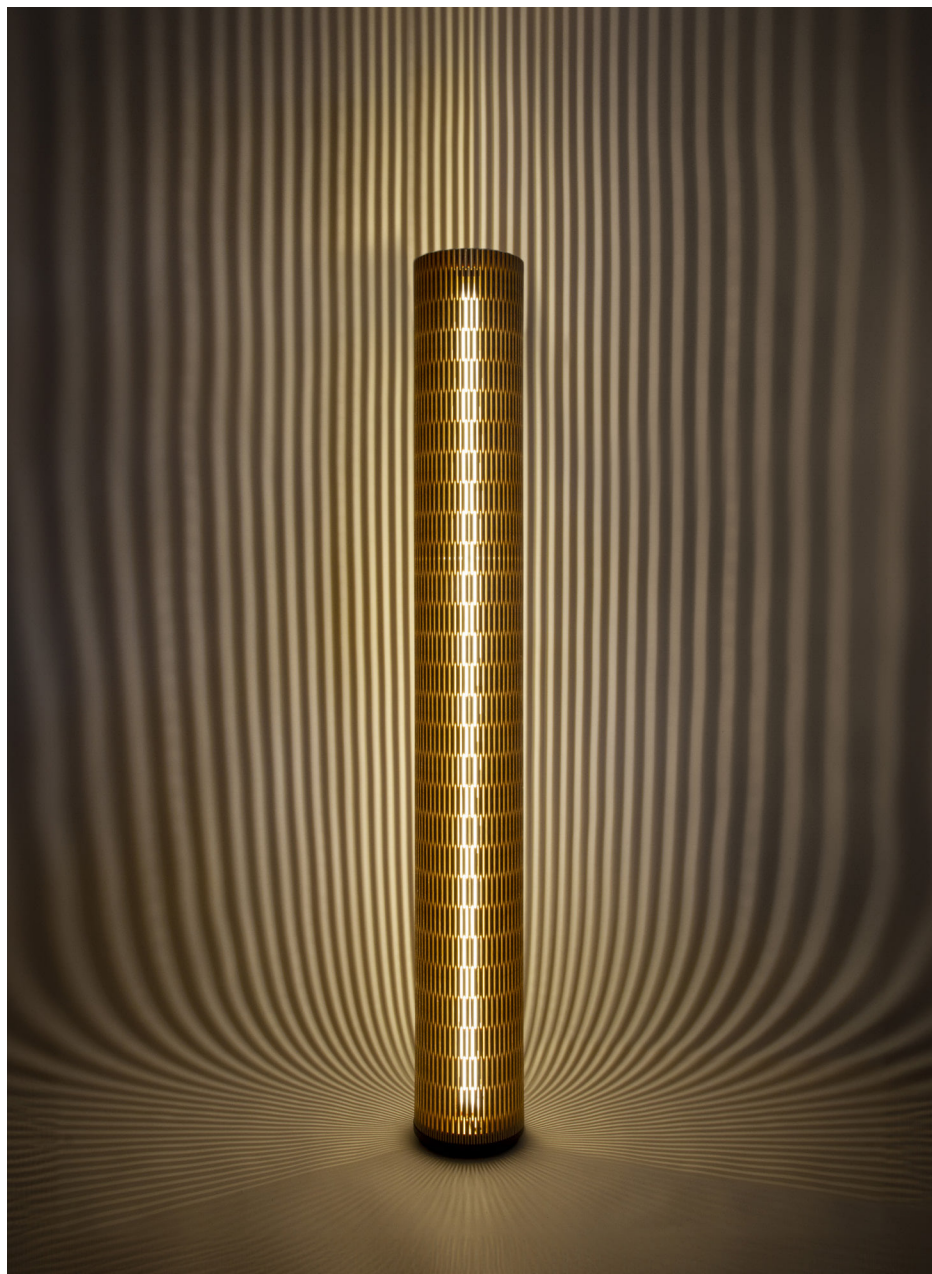

LIGHTING SERIES

ORA FLOOR LIGHT

A large Monstera plant with deep green, deeply lobed leaves is the central focus. It is potted in a wide, cylindrical copper-colored pot with a brushed metal texture. The pot sits on a matching copper-colored saucer. The background is a vertical bamboo or reed screen, creating a warm, textured backdrop. The lighting is soft and directional, highlighting the veins of the leaves and the metallic sheen of the pot.
