

Linar

Flexible Wood

spinneybeck

About

Linar in Douglas Fir Natural

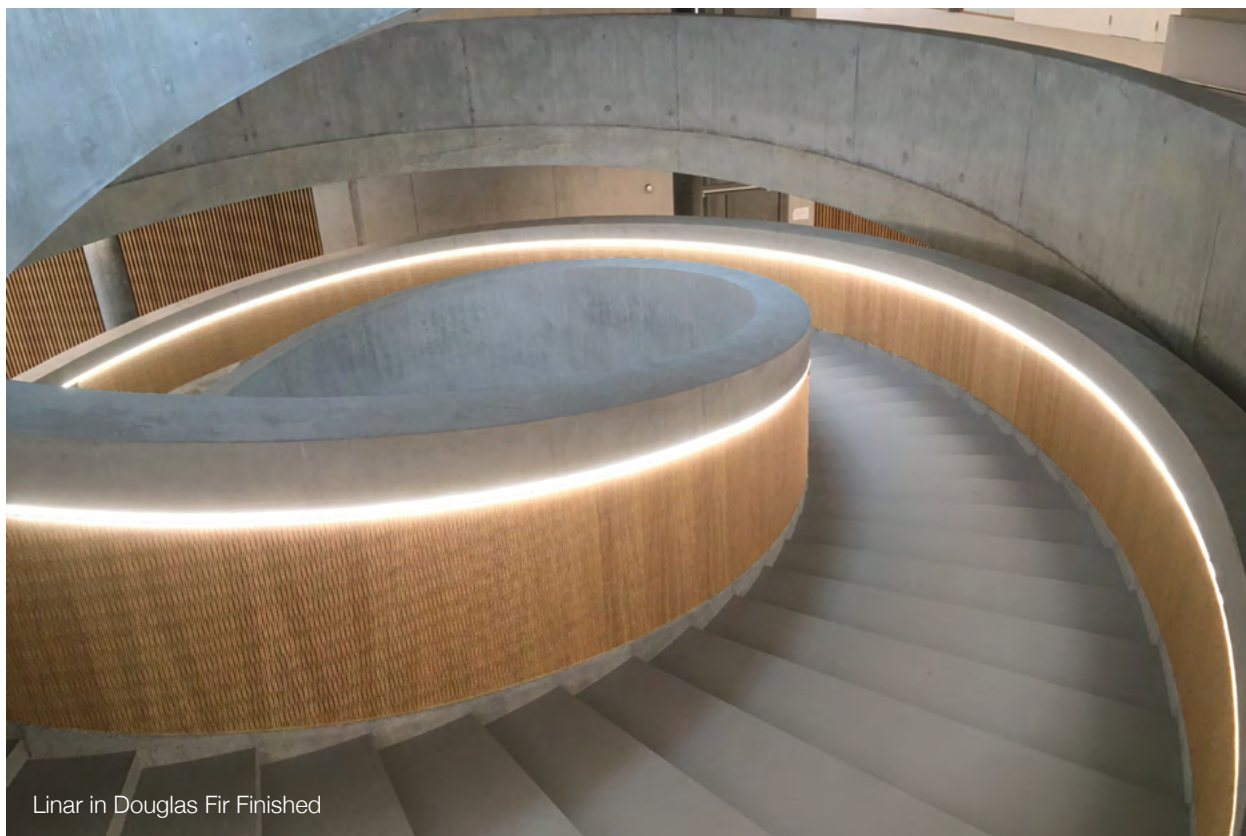

Linar in Douglas Fir Finished

Wood and engineered wood are made flexible with a patented incision process. Complex incisions allow textile-like properties plus create transparency and sound absorbing properties unexpected from wood products.

Regularity and continuity are the name of the game with Linar. The visual effect of this pattern creates a regular and homogenous surface. Available in standard sheet sizes in seven wood types in natural or finished, the front and reverse sides look clearly distinct, so application areas are primarily ceiling and wall panels.
